

## The Wheel of Returns

Welcome to the Wheel of Returns! A simple investment game that gives you the opportunity to wager your money in order to receive great daily returns on your AVAX.

Based on the Avalanche chain, the Wheel of Returns is quite simple. When you spin the wheel you'll determine your wager and your returns.

The initial investment into the Wheel is locked into the general pool of funds and is no longer accessible to the individual player, these pool funds that are invested to keep the Wheel of Returns profitable. The payout to players will be as a percentage of the wager per day that is available for between 5-100 days.

The returns at minimum will be 5% a day for 5 days, the maximum amount is 8% for 100 days. In that scenario, if you were to invest 100 AVAX, by the end of the 100 days, you'd be paid out 800 AVAX.

In this informational overview of the platform we'll go over three different aspects of the project.

# How to Play

## Step: 1

### Make Your Wager

This wager will determine your reward payout. You can spin again and wager other amounts as you like. But once you spin this wager and its rewards will be locked in. The minimum wager amount is 0.1 AVAX

## Step: 2

### Spin

This is the best part about The Wheel of Returns, spin the wheel as hard as you can and wait to see exactly what “Daily Return” and “Return Time” you get. After you spin this spin will show up with a countdown under your “Previous Spins” section on the Homepage. You can have a maximum of 100 spins from a single account.

## Step: 3

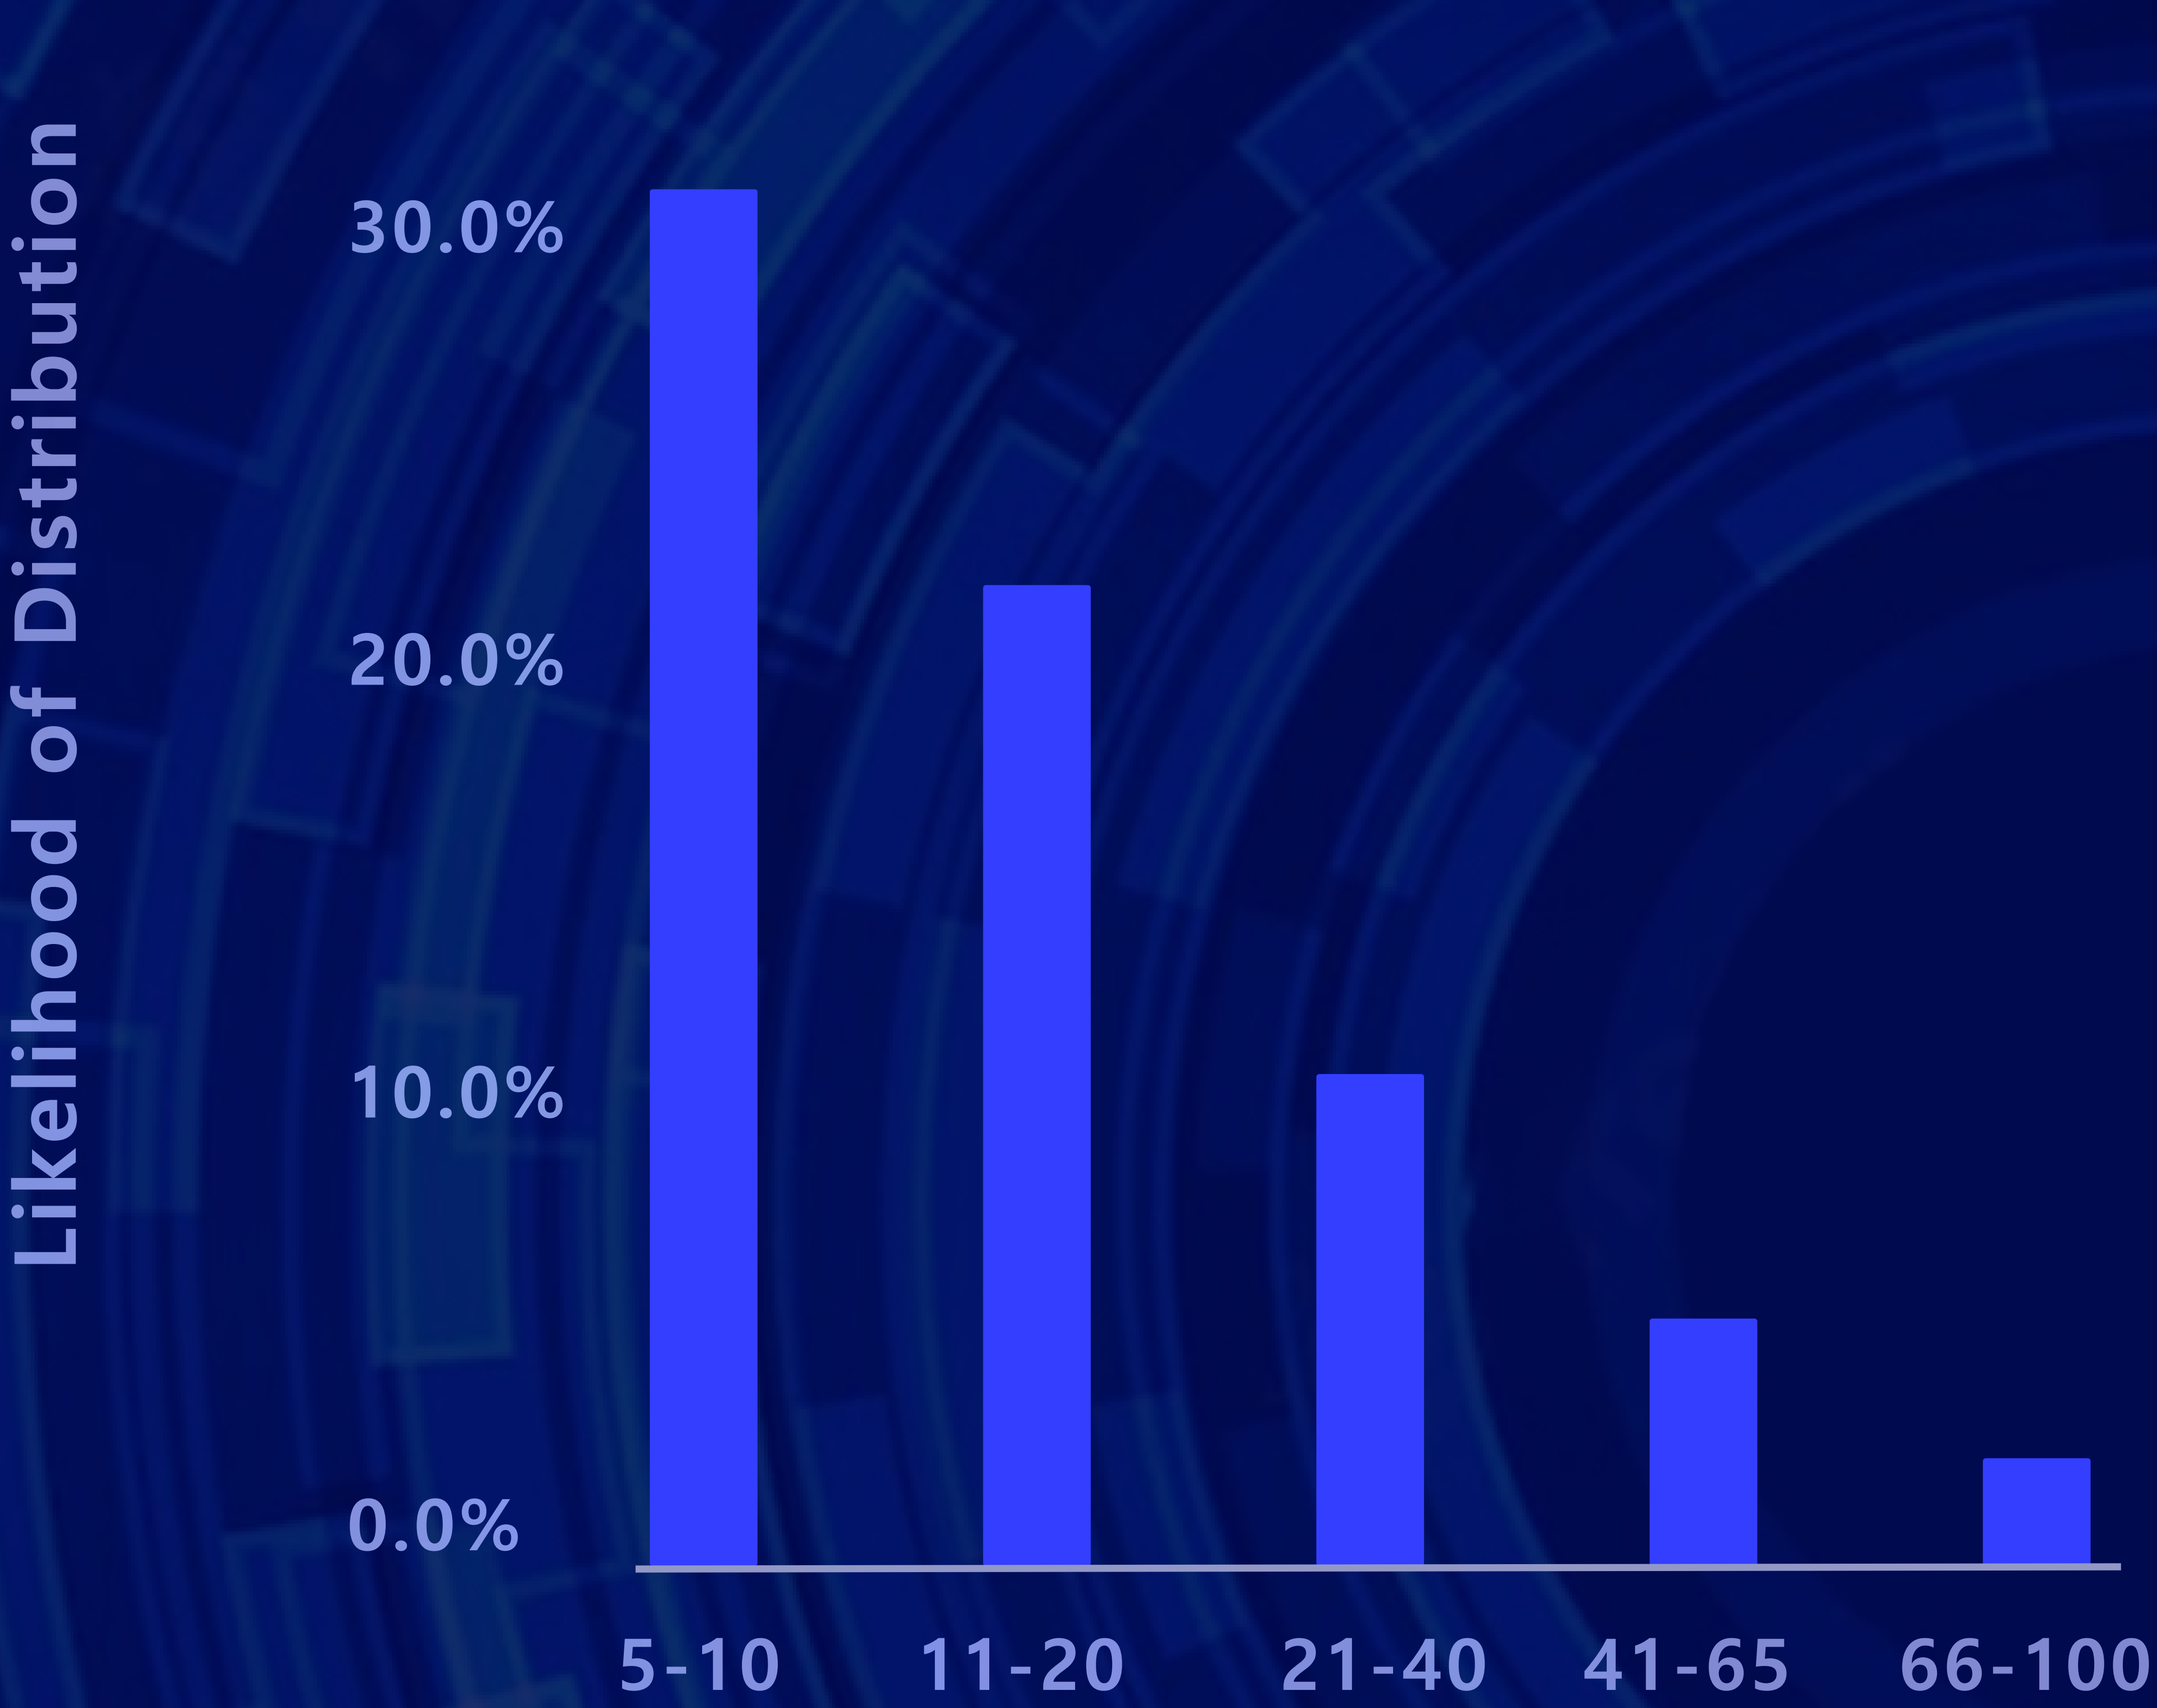

### Withdraw Your Rewards Daily

Once you spin, come back daily to claim your returns from your “Previous Spins” section. Click the “Claim Rewards” button to transfer your rewards. And Maybe, if you’re feeling lucky, use your rewards to take another spin!

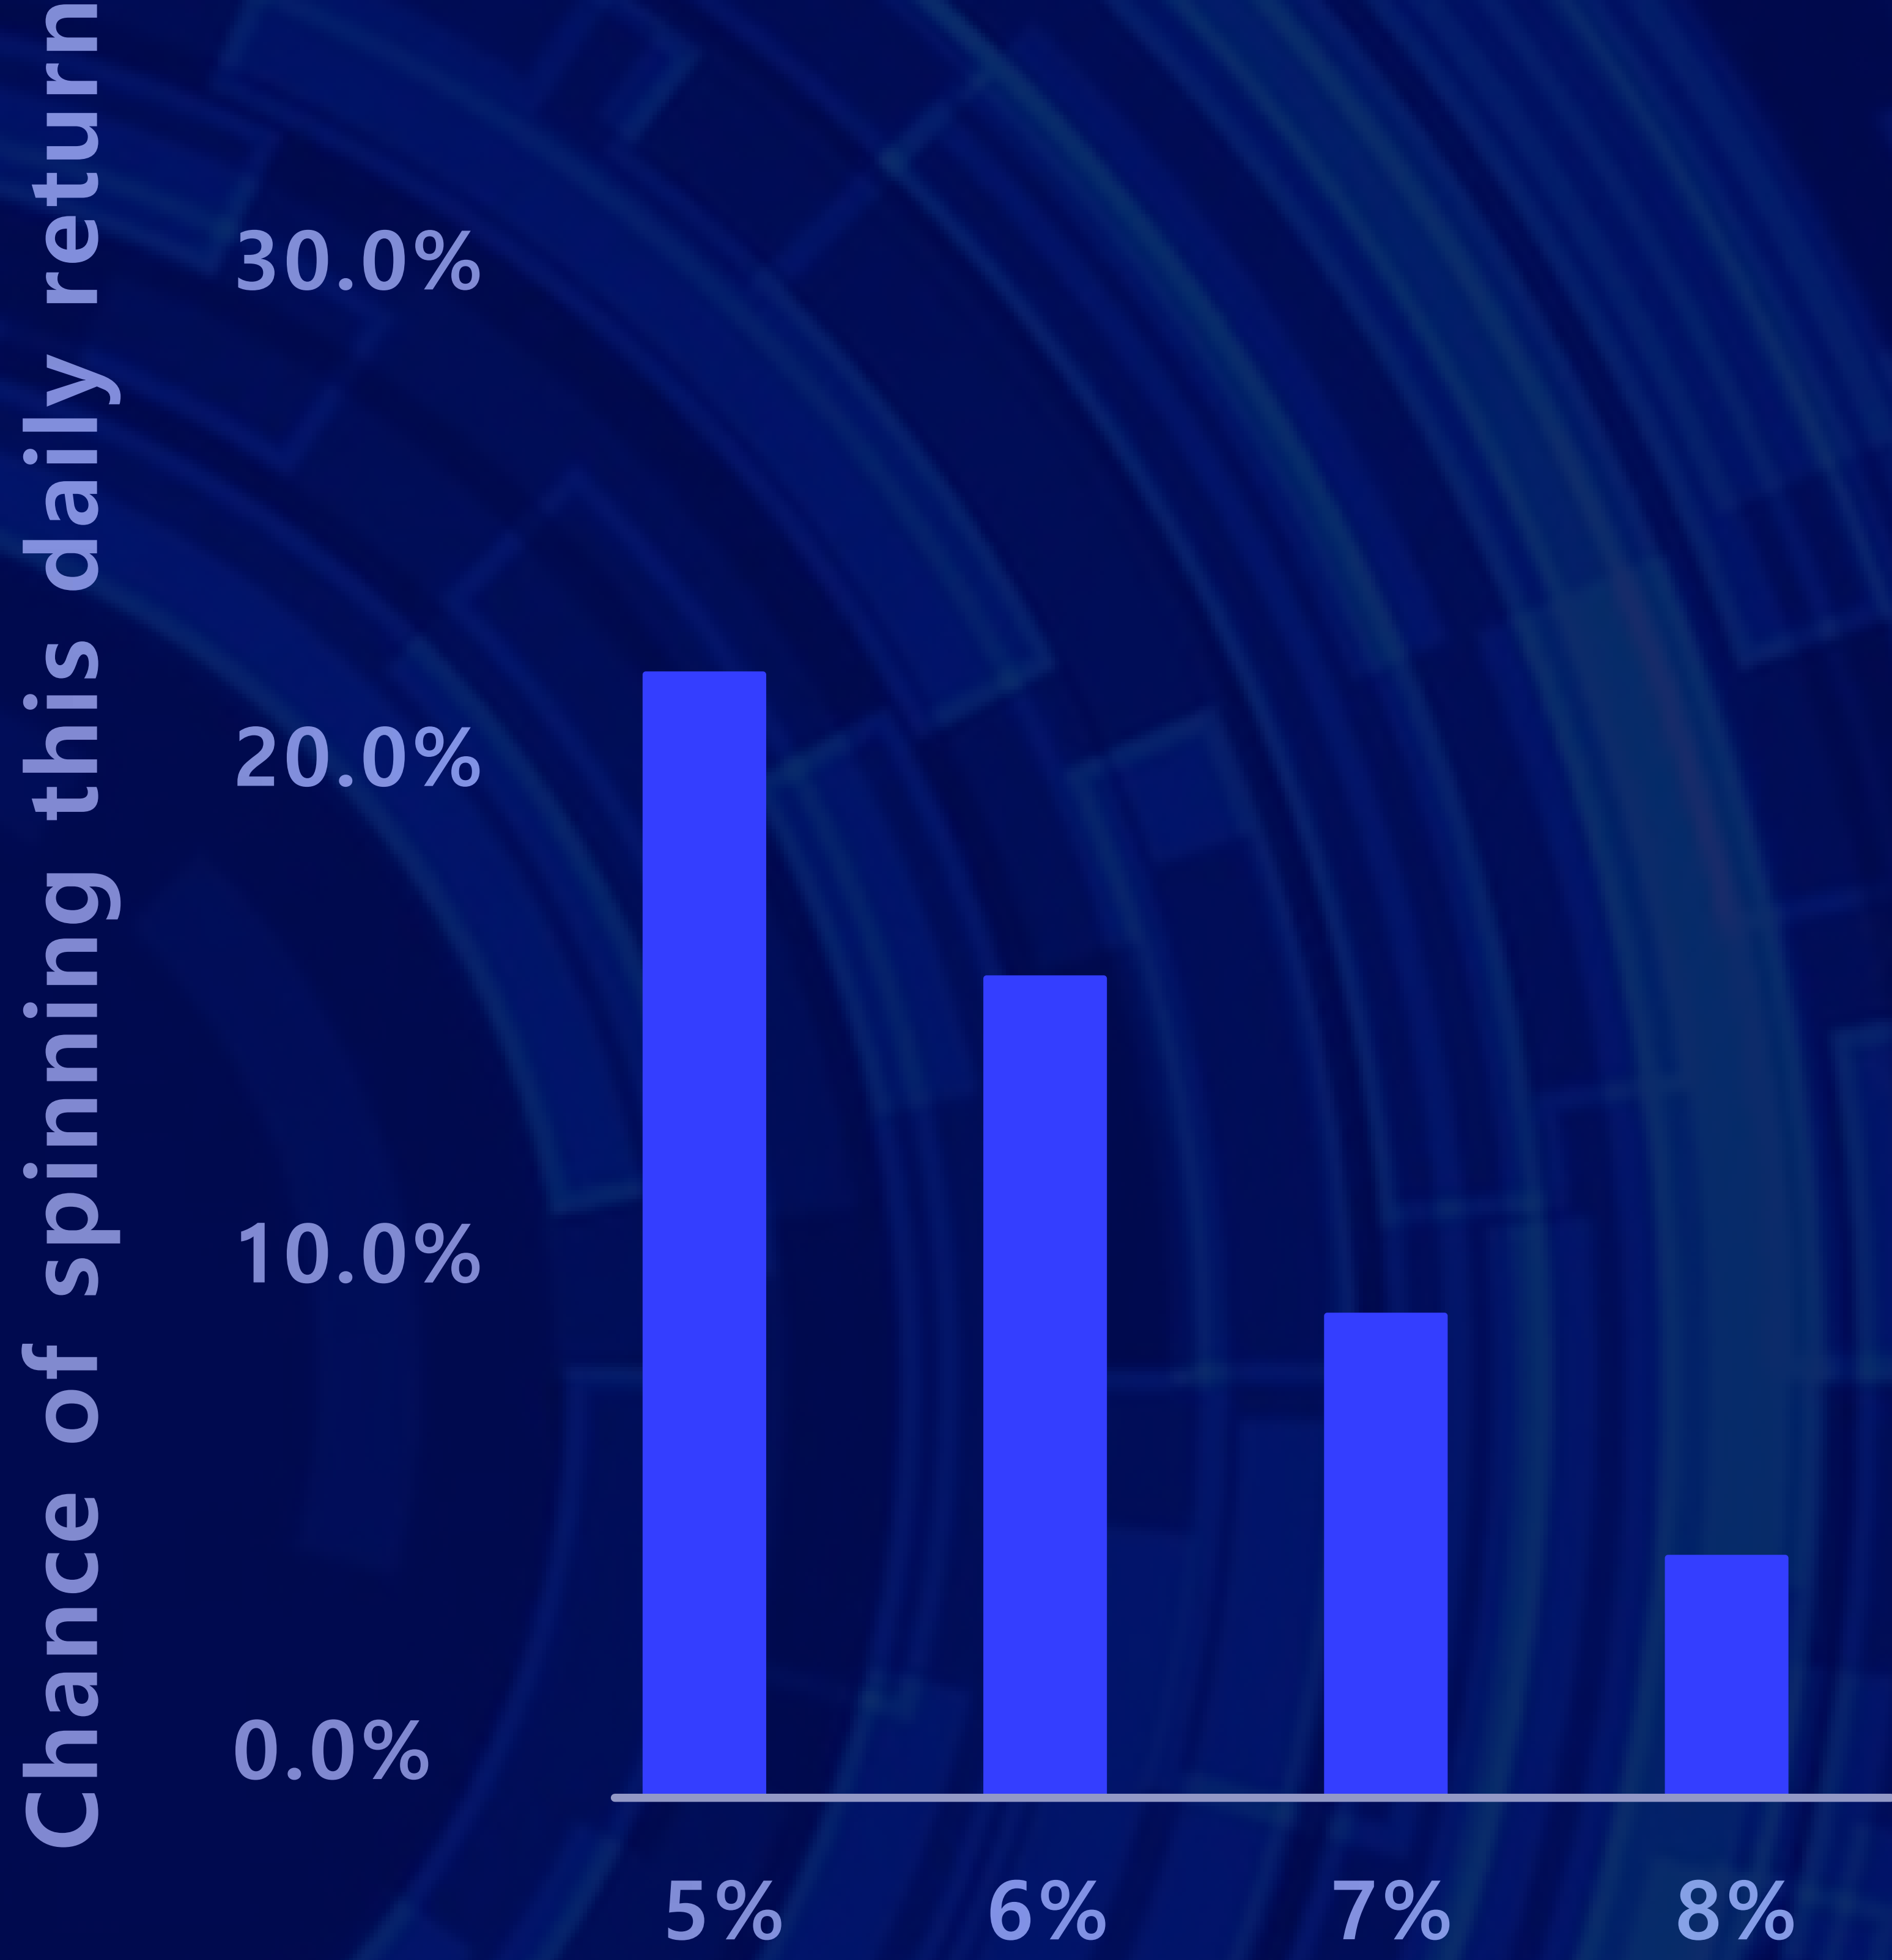

# Returns Percentage & Time Likelihood Charts & Matrices

Average Length of Daily Returns

Daily Returns Distributions

	5-10 Days	11-20 Days	21-40 Days	41-65 Days	66-100 Days
5%	9.75%	6.50%	3.25%	1.63%	0.82%
6%	7.50%	5.00%	2.50%	1.25%	0.63%
7%	5.25%	3.50%	1.75%	0.88%	0.44%
8%	3.00%	2.00%	1.00%	0.50%	0.25%

Seen in the charts above are the likelihood of getting any outcome from the wheel. The box in the upper left hand corner (indicated in green is the most common outcome of a 5-10 day window with 5% return and the lower right-hand corner in red is the least common with a 66-100 day window and 8% total return)

## Pool Governance

Once the wheel is spun, the wager will automatically be distributed into the Wheel of Returns' self-governed pool. This pool is automatically rebalanced based on the logic within its smart contract

This logic is immutable, and will optimize its lending returns based on the market conditions in order to yield the highest returns in order to satisfy the maintenance of the Wheel of Returns' payouts

This logic is a mirror of the PoolTogether logic but ported onto the AVAX network.

## Risks Involved

As described in the previous sections, we are reliant upon certain market conditions in order to maintain the stability of the payouts per spin. As a result, there will most likely come a time in which market conditions under perform what is necessary for payouts.

Based on our calculations this could be anywhere from 65 - 510 days after the inception of the project. Please do not invest any money that you are not willing to lose, and while we aim to give you the best return possible, we'd like you to know that this will not always be possible, so always DYOR.

If you have any questions about anything please do not hesitate to reach out to us via our various social media channels and support networks.
